JOURNAL OF CRYSTAL GROWTH

Subject index

Alloys
– of nickel aluminum 193
Aluminum
– gallium arsenide 284
– gallium indium phosphide 15
– trihydroxide 177
Apparatus
– for melt growth
– – by edge-defined film-fed growth 400
– – by zone melting 373
– for miscellaneous purposes
– – for measuring residual gas in silica glass ampoules 21
– – for real time observation during MBE growth 49
– – for technology of removing solidified melt from crucibles in CZ growth 357

Barium
– carbonate 225
– nitrate 209
– sulphate 225
Bismuth
– germanate 103
– silicate 103, 362

Cadmium
– selenide 73, 298
– sulphide 73
– telluride 303, 310
– telluride selenide 310
– zinc telluride 310
Calcium
– carbonate 156, 271
– phosphate dihydrate 184
– phosphate sulphate hydrate 184
– sulphate dihydrate 225
Charracterization
– by electrocapillary phenomena
– – of yttrium scandium gallium garnet 129
– by surface tension
– – of yttrium scandium gallium garnet 129
Clathrate crystals 16
Computer simulation
– of dopant concentration in Czochralski system 236
– of oscillation in floating zone technique 385
– of temperature in Czochralski system 236
– of velocity in Czochralski system 236
Convection 21, 209, 236, 253, 379, 385
Copper
– (II) chloride 147
– indium diselenide 332

Dendritic growth
– of cupric chloride 147
– of FCC crystals 403
Device characterization
– electronic materials 303
– heterojunction 15, 298
– light emitting diodes 15
– optoelectronic materials 5
– quantum wells 284
Diamond 140, 349
Diffusional control
– of calcium carbonate 271
– of organic alloys 354
Dissolution
– of biological crystals 156
– of clathrate crystals 165
– of magnesia 111

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 31, 193, 310
Eutectic growth
– of sodium nitrate/barium nitrate 209

Gadolinium
– gallium garnet 133
Gallium 49, 61
– arsenide 37, 49, 292
– indium phosphide 275
– nitride 5
– phosphide 15
Garnets 93, 129, 133
Germanium
– carbon 322
– silicide 78

Heterojunction, see Device characterization
Heat flow control
– in Czochralski system 236
Hydrodynamics, see Convection

Ice 171
Indium
– gallium arsenide 1
– phosphide 21
Iron
– garnets 93

Kinetics
– of growth 73, 117, 171, 177, 292, 322, 403
– of interface control 103
– of nucleation 271

Lasers, crystals for
– organic materials 406
Light emitting diodes, see Device characterization
Lithium
– niobate 103, 111, 339, 400
– titanate 87

Melt growth technique
– by Bridgman–Stockbarger method
– – of cadmium telluride 303, 310
– – of cadmium telluride selenide 310
– – of cadmium zinc telluride 310
– – theory of 253
– by chemical reduction
– – of lithium titanate 87
– by Czochralski method
– – of bismuth germanate 103
– – of bismuth silicate 103
– – of gadolinium gallium garnet 133
– – of gallium arsenide 37
– – of indium phosphide 21
– – of lithium niobate 103, 111
– – of tin 392
– – theory of 236
– by edge-defined film-fed growth
– – of lithium niobate 400
– by electrolysis
– – of lithium titanate 87
– by floating zone method
– – of barium nitrate/sodium nitrate eutectic 209
– – of bismuth silicate 362
– – theory 362, 379, 385
– by micro pulling-down method
– – of lithium niobate 339
– by uniaxial solidification
– – of nickel aluminum alloy 197
– by zone melting
– – of sodium nitrate 373
– – theory of 373
– theory of 245

Mercury
– iodide 124
Microgravity, growth under
– of bismuth silicate 362
– theory of 253
Morphological stability
– of calcium phosphate dihydrate 184
– of clathrate crystals 165
– of diamond 140
– of silicon germanium 78

Nickel
– aluminum alloy 193
Nonlinear optics, crystals for
– organic materials 406
Nucleation
– of calcium phosphate sulphate hydrate 184
– of carbonates and sulphates 225, 271
– of clathrate compounds 165
– of dislocations 133
– of gallium droplets 49, 61
Numbers
– Grashof 21, 103, 236
– Rayleigh 236

Optoelectronic materials, see Device characterization
Organic alloys 354
Organic isomers 165
Organic materials 406

Purification of materials
– of cadmium telluride 303
– of organic isomers 165
– of organic materials 406

Quantum wells, see Device characterization

Residual gas in silica glass ampoules 215

Silica
– glass ampoules, residual gas in 215
Silicon 268
– germanium 78, 315
Sodium
– nitrate 209, 373
Solid growth technique
– by recrystallization
– – of silicon 268
– by strain anneal
– – of silicon 268
Solution growth technique
– by epitaxy
– – of calcium carbonate 156
– by gel method
– – of barium carbonate 225
– – of barium sulphate 225
– – of calcium sulphate dihydrate 225

– – of strontium carbonate 225
– by low temperature method
– – of calcium carbonate 271
– – of calcium phosphate dihydrate 184
– – of calcium phosphate sulphate hydrate 184
– – of clathrate crystals 165
– – of cupric chloride 147
– – of thallium acid phthalate 327
Strontium
– carbonate 225
Superconductivity materials, high T_c
– bulk
– – of lithium titanate 87
Superlattices, multilayers
– of II–VI compounds 73, 315
Surface structure
– of gallium arsenide 49
– of gallium indium phosphide, defects on 275
– of titanium nitride 117

Thallium
– acid phthalate 327
Thin film growth, epitaxy
– by ionized cluster beam epitaxy
– – of zinc selenide 68
– by liquid phase epitaxy
– – of iron garnets 93
– by molecular beam epitaxy
– – of gallium 49, 61
– – of gallium arsenide 49
– – of germanium carbon 322
– – of silicon germanium 315
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of cadmium selenide 73
– – – of cadmium sulphide 73
– – – of diamond 140, 349
– – – of gallium nitride 5
– – – of silicon germanium 78
– – – of titanium nitride 117
– – – theory of 349
– – through evaporation and condensation
– – – of cadmium selenide 298
– – – of copper indium diselenide 332
– – – of zinc selenide 397
– – – of zinc telluride 298
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium arsenide 284
– – – of aluminum gallium indium phosphide 15
– – – of gallium arsenide 292
– – – of gallium indium phosphide 275
– – – of gallium phosphide 15
– – – of zinc selenide 31
– – – of zinc sulphoselenide 31
– – – theory of 292
Tin 392
– monoselenide 344
Titanium
– nitride 117
Twinning
– of FCC crystals 403

Vapor growth technique
– by evaporation and condensation
– – of ice 171
– – of mercury iodide 124
– – of tin monoselenide 344
– – theory of 124

Yttrium
– scandium gallium garnet 129

Zinc
– selenide 31, 68, 397
– sulphoselenide 31
– telluride 298
